

Senior Java Developer

The Role

The Senior Java Developer will be responsible for designing, developing, and maintaining applications for real-time publishing systems. You will work in an agile-based environment building creative Internet syndication products using technologies such as Java, Spring, GWT, Solr, MySQL, XML, Linux, and RSS. Come be a part of this team that is changing the way the web works in a fundamental way by providing real time Internet information and infrastructure!

Responsibilities

- Designing, developing, and deploying Java based news and social media applications
- Providing architectural input to project-related decisions
- Be comfortable functioning as a team lead, working closely with the Engineering Manager to coordinate activities for a small team of developers
- Define systems that include both hardware and software components
- Work independently with minimum supervision and a geographically dispersed team
- Use industry best practices to deliver high quality code

Requirements

- 5 years of professional software development with 5 years of Java coding experience
- Bachelor's/Master's Degree in Computer Science/Engineering or equivalent experience
- Multi-faceted with a wide array of talents and ability to problem solve
- Self-starter with initiative to accomplish tasks as an individual but also enjoys working on teams
- Strong communication skills, both verbal and written
- Experience developing and desire to develop J2EE web based applications

Preferred Qualifications

- Experience with some of the following technologies, in no particular order:
 - Google Web Toolkit (GWT), Spring MVC, Struts, JSP, FreeMarker
 - JavaScript, AJAX, jQuery, jQueryUI, Highcharts
 - Hibernate and Spring
 - Apache Solr/Lucene
 - Large volume XML and HTML parsers and generators
 - XML, RSS, and Atom
 - Maven, Ant
 - JUnit, Selenium, Concordion
 - HTML/5, CSS/3, cross browser compatibility
 - JMS
 - Apache, JBoss, Jetty
 - Other languages: C++, Scala, Node.js, Ruby
 - IDEs: IntelliJ, Eclipse, STS
 - Change Management: Subversion, Git
 - Bug Tracking: JIRA, Redmine
 - Linux, Perl, shell scripting
 - Big Data: Hadoop, HBase, Cassandra, Mongo, Redis, etc
 - MySQL design, tuning, and experience with very large databases
- Experience with large scale web systems
- Experience with agile testing methodologies including test-first development
- Experience working within Scrum and Agile
- Understanding of networking and how applications work through the networks
